Subject: Techalloy Nov. 2016 Monthly Progress Report

John--I have looked over the Nov. 2016 Monthly Progress Report for the Techalloy (Central Wire) Facility in Union, Illinois. I have only a couple comments.

1. Progress Made This Reporting Period. As near as I can tell from item 3 extraction well 2 is still not fully functional. How does the volume of water pumped individually from EW-1 and EW-2 in Nov. 2016 compare to historical norms? How does any change in pumping affect plume capture?

2. Upcoming Events: It's my understanding that samples are to be collected from the well monthly while pumping occurs, not every other month. Ex. 6 Personal Privacy (PP)

3. Can Autumwood find out more detail on the pumping at the Ex. 6 Personal Privacy (PP)? At what time does pumping begin every day? End? Does pumping occur every day of the week? Off Saturday? Sunday? There may be some small pumping effects at the DGW-2 well from pumping at SBN, but I need more detail on the pumping to help define cause and effect.
